

Intro ([00:00:00](#)):

I had a very strange childhood, had the worst case any doctor had ever seen my job is to keep healing. So that is the story. We all have remarkable stories within stories of adversity, challenges, triumphs, and ultimately, this is your health, your story, the podcast.

Caspar ([00:00:23](#)):

Have you ever wondered how wireless charging really works. It seems like a trick Nikola Tesla would come up with and he actually did it. It's called warden cliff tower. It's a high voltage wireless energy transmission station. He built way back in 1901. But today we see this phenomena with wireless cell phone chargers, being a curious person. I wanted to understand how this actually works and without getting into too much of the science and the physics, the basic principles that your phone receives a transmission of electrical energy from the charging station, and rather than using wires, it goes through a magnetic field. Well, another interesting fact is the human body creates its own magnetic field, and it's not just the human body, but earth itself has its own magnetic field. And we're constantly interacting with different magnetic fields all around us, but can we charge ourselves and regenerate our cells kind of like a cell phone does wirelessly. That's the question we look at today as we speak with the creators of a unique and high tech device that claims not to charge phones, wirelessly, but biological beings. This is the story of the BioCharger NG with Jim law and Jim Gerard.

Caspar ([00:01:33](#)):

So to get started. I really wanted to start somewhere that I found fascinating when I was looking over your bios, and JG. I'd love to start with you and your work with a protege of Nikola Tesla. And could you tell us about that? Because first off, it's the Nikola Tesla we're talking about here and, and really what that kind of led you, whether it led you into the idea for BioCharger itself.

Jim G ([00:01:59](#)):

Yeah. So that's a great question. So I met Dr. Fits in the late eighties and he was a very interesting guy. It was, he was about 83, 84 years old when I'd met him. He wasn't really too active, but I got to live with him for about six months. And you know, we spent quite a bit of time talking, doing some research out in his lab as well, as, his library of information he had, he just had an enormous database of information. And that was one of the, you know, the beginnings of the, you know, the basis of the ch BioCharger. So what happened for me is back in the eighties, I had a landscaping company. So I was exposed to the pesticides and herbicides and started to come down with the skin condition alopecia pretty bad.

Jim G ([00:02:51](#)):

So I decided, you know, I looked at my diet, cleaned up, my diet, did what I needed to do and realize that there's probably more to it and looked at the fertilizers just because we know now the dangers of it. So I went to this organic farm convention and that's where I first learned about Nikola Tesla. And in that process, I met a couple mentors that helped guide me over to meet Dr. Fitz. But all that was just you know, the very beginnings of starting to research all the different scientists that were out there Lukowski, Rife cursor, Gurshowitz, Dedshaw PEMF work and started looking at all these different devices and started to experiment with them and saw that there was all these different devices that were out there. And we could actually combine one of those, all these different technologies into one system. And that's really what the basis of the BioCharger.

Caspar ([00:03:46](#)):

Yeah, no, it's, it's a wonderful system that is about synergizing, different, subtle energies and all these different things that if you get into the idea of energy medicine, you're going to come across at one point or another, like you said, the work of Lukowski and Tesla and so many other. Now, Jim, you have a slightly different background. And I understand you're, you're more of the entrepreneurial business side in the past, working for companies like Apple and others. So can you go into how, what led you into the BioCharger realm and healing tech?

Jim L ([00:04:17](#)):

So back in the eighties I had really gone down the path of high technology was working with Apple computer and had recognized that, you know, so many things could be done with, with advanced technology and had a chance to work for Steve jobs after Apple at Next. And one of the things that resonated with me was his approach to anything, any product, which was begin with the user experience in mind and had a pretty good run with two other companies where we, we developed a new technology and brought it into an existing legacy business. And these were B2B type ways. One was managing repairs and maintenance for restaurant chains around the country, remotely through a database in a call center and, you know, tracking vendor vendors, the other was controlling apertures lighting, et cetera, in large multiunit operators that had hundreds or thousands of locations geographically dispersed around the country.

Jim L ([00:05:29](#)):

And instead of trying to control each one and, you know, never know what's really happening, we brought all that above site and found a way that you could have a thousand locations and know which 10 you needed to be focused on. So those are again, all B to B type things. But Jim and I met through our sons who played football together in high school were best of friends. He and I would talk on the sidelines and, you know, we had a chance talk and get to know each other a little bit. And I was fascinated. My, my, my son would come home and say, you know, I was over at Mr. Gerard's and, you know, shooting this 10 foot spark out of his garage. So had you know, really started to understand a little more what, what Jim was doing. I mean, the Tesla and, and he had this crazy contraption called the bio charger and, and he really reminded me of doc and back to the future.

Jim L ([00:06:25](#)):

And it was like the flux capacitor. I mean, there was nothing digital on it whatsoever. So when, when he first introduced me to it, you know, I had a heavy dose of skepticism and I, it, it certainly wasn't commercially viable, but I thought, okay, let me, let me check this thing out. And I actually got one of the analog versions from him and used it for about 30 days and did a number of different measurements and noticed, you know, I felt better. I had a faster recovery. My mind was working quicker. I was sleeping better. You know, a lot of just in general. And I was training with the guy was a, he had his masters in exercise science and had a great baseline with me. And we made giant strides in a very short period of time that I could walk into the gym.

Jim L ([00:07:18](#)):

And he would know if I had BioCharged. So I knew there was something to this and what we did was you know, Jim and I got together and I brought in some, some of the technology guys from our prior ventures. And we said, you know, this is a bot is an analog as you can get. But if Tesla and rifle Haas were around today, they'd be wanting to use state. They wouldn't be using vacuum tubes and, and, you know, voltage generators and frequency generators they'd be using the cloud and, you know,

technology and software. So Jim liked, the idea, and we formed advanced file technologies in 2014. And it took us 18 months to get a BioCharger N G next generation system out that's a hundred percent style solid state software based, you know, is connected to the cloud.

Jim L ([00:08:16](#)):

And it's just been no turning back. It's just been amazing how much, how much growth we've experienced, but more importantly, the reach that we've had. And I was looking back today. I mean, the reason we're having this conversation is five years ago, your center, and, you know, it's very, well-known it was a total honor for us. And I have to say unexpected that you invest in or BioCharger. We were so early into it. That was 2015. You were, I think bio charger, number 85 or something like that. So we appreciate so much that you know, your team had the foresight and understood that there was something to these legacy technologies. When I think the BioCharger has been able to do is not only pull it forward and leverage what's there today, but we continue to enhance it as a platform.

Jim L ([00:09:15](#)):

And back in 2015, that BioCharger, you purchased and took a crap shoot with us on had 11 recipes. And for our, the audience recipes are energy and frequency programs designed for a specific outcome, let's say, so we haven't for energy. And I had one for pain and one for sleep. And, you know, a handful of others today, we have 1100 and your BioCharger has access to all of those. And that's something that was a vision of ours, was knowing that we could develop a platform and then allow others to influence it and get the community inspired recipes and research, and, and all of the folks like New York Center for Innovative Medicine that actually takes these systems and finds better ways to use them. And which translates into us, creating new recipes that help new areas, and everybody gets the benefit of, so we've never charged for any of that. That's a little bit of a plug, but we're really proud that we continue to enhance it. And that's so different. You have probably 30 different modalities that you guys use. I mean, you know, it all, you're the, you know, you guys are the premium when it comes to the premier when it comes to that. But I bet you were one of the only ones, if not the only one that improves every week and you get more capability from it,

Caspar ([00:10:49](#)):

It's a really cool device in that way, in that it's so dynamic and always improving, like you said, and I remember back in 2015 asking my father, what is this thing? Because for those that don't know, it's this, like, it's the size of a mini fridge. You could say, it's got this clear glass hexagon, and you're looking at it when it's not on. You're like, what is that? It's got the Tesla coil, it's got all these things. And my father says, just wait. And he turns it on. I kind of stepped back away from it. Right? Cause it starts lighting up and sounds are coming out and, and listen, he explained it to me quite well. We were all was fascinated by all these subtle energy methods and, and, you know, looking at Rife frequencies, seeing how we could help the body to adjust on that energetic level.

Caspar ([00:11:33](#)):

So it was really interesting to then see it and visualize something there happening within this machine. But for those who don't know, do you have like an elevator pitch, simple way of explaining what's going on with the bio charger? We do. I'd love to hear it because you know, for us, it's always okay, how much time do you have? And, and those elevator pitches suddenly turn into 15 minutes and you're explaining quantum physics and you're explaining all these different masters who took their whole life to get to certain discoveries. So tell us what you got.

Jim L ([00:12:08](#)):

Sure. So Jim and I'll ham and egg, it pretty well on that. But bottom line is we, we like to affectionately call the bio charger is the ultimate human recharging station. And that's an oversimplified and it's a very complex thing, but what's not so hard to understand is that there was a new statistic recently released pre COVID that showed that Americans spend approximately 90% of their time indoors. That was pre COVID. And I guarantee you that number has not decreased. And consequently, as you well know, our bodies require energies that exist in nature in order to function properly. So, you know, and these energies, many of them have all of the efficacy, the validation through NIH studies, et cetera, but those energies are vital to our health and wellness lacking those energies. And you can look at the work from Dr. Jerry Tennant and voltages healing.

Jim L ([00:13:18](#)):

You know, there are three common characteristics to healthy cells, and by the way, healthy cells are the only way making new cells that work properly is the only way our body can heal. So three most important characteristics of healthy cells is take the nutrients, dealing with toxicity and voltage, inadequate voltage at the cellular level results in non-perfect regeneration of cells. Your body are degrading the quality of cell. So very hard for your body to not only regenerate, but to heal itself or deal with stress. If it doesn't have adequate energy. So if you look at pulsed electromagnetic fields, photonic energy or light radio-based frequencies in harmonics or frequencies and harmonics, which are going on all the time. There's a ringing in our atmosphere, which is created by a hundred lightning strikes a second happen around all high voltage. So because we're not exposed.

Jim L ([00:14:19](#)):

And you think about we're inside, we're shielded right now, the you're getting EMF, you're getting energy, all right. But you know, from the routers and the cell phone and the mic and the Bluetooth, and you know, maybe even a microwave, but those are not the kind of energies our bodies thrive on. We'll just kind of leave it that way. So the BioCharger replicates and amplifies those four key energy types that exist in nature that allow you to sit to it. And in 12 to 15 minutes enable your body to be exposed to those energy types in a way that it can actually absorb the energy. And the result of that is it's not curing anything. It's allowing your body to have the energy. It needs to function properly and to regenerate.

Caspar ([00:15:13](#)):

Right? And listen, we have had patients who say that is their favorite therapy. And like you mentioned, we have a lot, there's over a hundred different therapies where utilizing how at this clinic, it's just constantly, we're looking for new stuff and how we found you guys five years ago. I'm very thankful for that. But many patients do explain and do tell that they feel re-energized or grounded, or these words that you would normally say you get in nature. So that, that replication of nature through technology to me is fascinating, right? To talk about some of that technology, because we mentioned PEMF, Rife and everything JG, can you go into how'd you come up with the combination of things that went into the BioCharger? Because a lot of times when I see technology, now, it is just let's try and throw, or even I'll talk about health in general supplements. Let's try and throw in as many kinds of cool, interesting ingredients into one pill, and then say, it's a therapeutic kind of, you know, answer to this, but you test it and sometimes the synergy doesn't work. You can't just throw a bunch of ingredients in a pot and call it a Michelin star meal and serve it to people. So how did you come up with the precise ones in key go into exactly what the different technologies are in bio charger?

Jim G ([00:16:28](#)):

Surely. So, as Jim mentioned earlier, there are the four different energy types. So we have that pulse magnetic fields. So magnetic fields work differently on a body than an electric field. So I guess I'll first start off with the electric field. So the electric field, you have this voltage and how voltage our electric field impacts the cell. Is it it, it affects the cell membrane itself. So the cell membrane acts like an insulator or dielectric, and it's actually a switch is what it is. So what happens in normal cellular function, you have these positive ion charges on the outside. You have these negative ion charges on the inside. It stresses the cell membrane. It creates a tiny hole, which becomes an ion channel, dependent on how that ion channel, how big it opens and how quickly it opens and closes, determines what type of protein is driven, what type of hormones are driven, or if it's just ATP function, where you're moving sodium, potassium, back and forth, but that electric field triggers that whole function.

Jim G ([00:17:28](#)):

So until that ion channel opens up, nothing happens. So in healthy cellular function that's what's happening, but unhealthy cellular functions, you begin to have these not enough charge to create that effect on ion channels. So with the electric field, is, is it stresses the, the cell membrane like insulator a dielectric so much like with the electricity and the, when you start applying voltage hired higher voltage to a capacitor, you begin just stress that insulation or dielectric that's within the capacitor. And so finally short circuits creates these little tiny pinholes will. Same thing happens on a cellular level on the cell membrane. So as you apply high voltage to it you begin to create these little tiny holes, which become ion channels that begin to create that healthy cellular function. So we're really not charging the cells up like a battery per se.

Jim G ([00:18:17](#)):

But what we're doing is I look at it is it's like a battery charger that you don't have to switch turned on. So you have it all set up. It's ready to do its function of charging. But until you flip that switch on nothing happens. And on a cellular level, the same thing happens. You have this electrical, chemical reaction, it's just sitting there ready to happen. And until that cell membrane opens up and Gates, nothing is occurring. So that's that first effect. So with that voltage, we can begin to artificially open that cell membrane to begin gating it. Now the magnetic field works completely different. So magnetic field, isn't going to stress the cell membrane, but what the magnetic field does is it affects the charges. So you have, again, those ion charges on the outside of the cell membrane and the ion charges on the inside of the cell membrane.

Jim G ([00:19:01](#)):

When you apply a magnetic field much, like when you go do an MRI, you know, they expose you to this magnetic field that aligns everything up and aligns all those charged particles. So when that happens, then it helps to rearrange those ions that are on the outside the inside to help naturally create that ion channels. So again, so they're working sort of the same but differently. So the magnetic field helps to orientate to the charges are what we like to say is it helps arrange everything outside and inside. And then the electric field is what Gates it to allow it to move inside and outside. So we felt that those are two very important parts that are completely different, that we saw. We saw in these different technologies that could be a benefit. So Lahovsky in his original work had these high voltages, but we also have this frequency and harmonics.

Jim G ([00:19:48](#)):

So frequencies and harmonics actually impact things differently. So again, back to that cell membrane, with the electric field. So if we can gate and open and close it, it is certain rate how wide we open it, how long we open it will help drive specific ions dependent on how we gate that. So as you begin to apply these variable frequencies and harmonics, you begin to affect the way in which the cell membrane is gating, which changes the different channels that are beginning to open up with it. But there's also another part of frequencies and harmonics that are more on that resonant effect. So when you think about everything that vibrates light vibrates, it's atoms vibrates the speed of light. As you slow it down, there's some molecular spans molecular band spectra, that's slightly lower than that. And then you have the, you know, the magnetic residence.

Jim G ([00:20:37](#)):

So everything in life is vibrating. Your molecules are vibrating. The internal nucleus is vibrating the cell membrane. So everything has its own unique vibrational characteristics. And you can transfer energy through those vibrations through sympathetic vibration, much like two tuning forks are the same pitch by strike one, through sympathetic vibration. The other one will start to vibrate, but if I take two different ones, nothing will happen. So what Rife discovered in this whole process is you can generate these frequencies and harmonics and you can actually vary it. So when did the things that I found that was unique to Rife that was different to Lahovsky with the multi wave oscillator was he could generate unique sets of harmonics and frequencies and the way in which he discovered it is he pulsed a carrier wave. When you pulse a carrier wave, you generate harmonics and frequencies.

Jim G ([00:21:30](#)):

And I like to compare it to music. So in music, if you have two different notes, you generate harmonies or harmonics by vaying one to the note, I generate unique sets of harmonics and harmonics and frequencies. So with radio, you could do the same thing. So as I vary one of the frequencies, I'm literally generating hundreds of thousands of different harmonics and frequencies that span AMFM shortwave long wave UHF, VHF all the way up the visible light. And even though hundreds of thousand sounds like a lot of frequencies and harmonics simultaneously, but to see it literally quadrillions of frequencies, it's a spit in a bucket. So nature, it requires, you know, so we're always exposed to these frequencies and harmonics, as Jim alluded to through lightning discharges, while we also have the lightning discharges on other, other planets and the sun outside our solar system.

Jim G ([00:22:22](#)):

So everything is produced in these lightning discharges and each lightning discharge generates a unique set of hundreds, of thousands of different harmonics and frequencies in order to fill up that whole spectrum. You know, you need the whole universe of spinning and to generate all these different harmonics and frequencies, but here on earth, we can't do that. So with the technology Rife discovered by varying these pulse frequencies, you can begin to generate unique sets of hundreds of thousands of harmonics and frequencies nature does it by varying cloud structures to generate a unique strike that generates the hundreds of thousands. But we applied technology to, as I mentioned earlier, by changing these pulse frequencies, you generate these side bands of harmonics and frequencies that we can completely control and they follow known mathematical principles. So what I pulse at specific frequencies, it will generate that same set of harmonics and frequencies.

Jim G ([00:23:15](#)):

And as I change, it generates that same set. So it follows these known principles, and if you understand how atoms vibrates, how molecules vibrates and how the nucleus is vibrating. Now you can begin to transfer energy and it, by generating literally these different hundreds of thousands of different harmonics and frequencies. So in our recipes or programs, what we're doing is we're varying these things. So you could target for a specific outcome. So if you're just slightly changing frequencies, you're just slightly changing the harmonics and frequency. So over time, it's like these little clusters of harmonics and frequencies. And then we have other recipes that are just more of a general wellness, where we're just randomly generating these harmonics and frequencies, very similar to nature. So with our recipes or programs, we're able to either tailor, make it to specific outcomes, or we could just do it for general wellness.

Jim G ([00:24:05](#)):

So that was the feature of Rife that he brought into the equation. And then there's that visible light component and, you know, light is life and how does light knit generate their frequency? So if when you go outside and you know, the most common question in the world for kids to ask their parents that they don't know is what causes the blue in the sky. Well, the blues in the sky is all these different gases in the atmosphere that get excited too, for a lesson that releases these photons of light through the visible light spectrum. So what we're trying to do with our system is we're trying to generate that wide spectrum of frequencies and harmonics. So when you use the various gas tubes that we generate regenerating more of that spectrum of frequencies into visible light spectrum. So, you know, as you know, you have these devices like the infrared or far infrared red you have these other devices, like the helium neon lasers that we see all these benefits of these gas tubes.

Jim G ([00:24:59](#)):

And, you know, I thought, well, let's just start adding all of these together. You know, nature just doesn't produce infrared or far infrared or just argon light, but they produce that full spectrum as a result of all the gases in the atmosphere. So we're trying to replicate that. So as we mentioned earlier, this whole picture is all about replicating. What actually happens in nature. And we don't get that because we were inside and we have these, you know, we're in a Faraday cage where we're blocking all that natural energy. And that's one of the things that, you know, the basis of the BioCharges to restore that natural energy so that the cell can actually work properly.

Caspar ([00:25:33](#)):

Yeah. It's really fascinating. I'm sure if you're anybody interested in energy or any, you just geeked out, cause you just talked about so many things there that are so essential to life in a sense. And if you go down the rabbit hole enough, I have, for most of my life, you hear about these things about photonic energy. You hear about vibrations, of course you equate music and sound and all these things to frequency suddenly, and you realize that your body requires this to live. It's it's, it's not even, you know, you talk about astronauts that go into outer space. They have to find certain oscillators and frequency generators, otherwise they don't regenerate as well. So this is truly essential in so much. So many of the patients we see have lost that sort of energy, the frequencies, the vibrations, and that is the initiation point of disease for so many.

Caspar ([00:26:26](#)):

So that's really interesting. And I love everything you said there, can you go a little or either you, maybe Jim, you could take this one. Can you go into the recipes a little bit more? Because you said you started

with a few back, you know, in 2015 or so you got a lot more now I've seen them and they're always changing and that's something, some people may not understand. Isn't a recipe, a recipe and shouldn't it stay? Why, why is it changing? Why are we having this BioCharger always connected to the cloud and taking in new information and adapting?

Jim L ([00:26:58](#)):

Great question. First off the BioCharger, you know, can run standalone. You can load your favorite 40 recipes on it and never connect again, but you're shorting, you know, you're, you're kind of, you know, shorting yourself on that. The first thing is that is Jim pointed out the BioCharger has a unique ability and kind of the IP behind it is the way that we're able to control these frequencies along with the, the voltage, the duty cycle, the wave form, the the duration. So we're really able to get precise around configuring. And so that allows us to get more granular and repeatable. And so that's just head and shoulders above any of the, kind of the earlier or the legacy versions of any of the **devices** Jim mimicked initially, because you just can't get that kind of control without, without software and, and, and more solid state, but by casting a wide broad spectrum, full range of frequencies as a general wellness tonic, if you will.

Jm L ([00:28:09](#)):

And we have several recipes that fall under kind of general health and wellness, that target different aspects of that. You know, if you want, you know, if you recovering from a workout, there's a different, there's a different recipe. Then if you're preparing for a workout if you're preparing to go to bed, we have a theta wave recipe that helps you, you know, sleep and work with you know, versus the alpha waves and gamma waves that we would use to energize or get things going. So the ability and, you know, there's real research and now more valid, validated than ever with some of the work that's being done with cancer research, et cetera, and using frequencies for specifically targeting things. But we have the unique ability to do the research. And I identify that for example, for Lyme or a tick-borne disease that, you know, there are a range of frequencies that can allow you to go in and target a parasite, for example.

Jim L ([00:29:14](#)):

And if you can create a recipe that uses a combination of those frequencies with just the right amount of power and just the right amount of frequency and duration, etc. You can have that impact that you're looking for. One of the things that we've discovered. So, so that has led to the growth and expansion of the recipes from a small number to a very large number because different and I, you know, again, a BioCharger doesn't heal anything, but it helps support recovery from, and that is turned into a broad range of conditions that I think you and I would have a hard time coming up with that. We don't have a recipe for today. What we're doing is we're always learning and we're evolving. And so are the researchers and practitioners that are using the BioCharger around the world, and they will lead us to help improve things by research that they've done that say, you know, we did you know, we've been using this recipe, but we found that if we combined another component from another recipe with it, that not only did it help the condition, but it improved the detoxification or accelerated the detoxification things along those lines.

Jim L ([00:30:33](#)):

And then we also wanted to incorporate a little bit of the wellness sweep into every recipe. So rather than, you know, necessarily having a recipe, that's targeting a migraine, for example, where we use a

very specific set of recipe, a set of frequencies, we have an intro that kind of opens the mind. It does a broad sweep. And then we, we focus on that specific indication and then we have an exit it's just kind of a calming effect. And you know, we don't always do it that way, but we found that combining two or three scent, you know, outcomes into one recipe can allow us to have even greater impact.

Caspar ([00:31:20](#)):

Yeah. You know, the funny thing is when you talk about these recipes, it always takes me back to food, right. And you know you're always kind of changing it dynamically as it goes around, you know, any great chef is never going to sit on one recipe he's going to use new ingredients and things change over time. So that's why the dynamic side of it, the constant changing is something we definitely appreciate. We're always looking at those updates. Are there any, I have this question from a staff member actually, are there any anti-aging type recipes or weight loss recipes?

Jim L ([00:31:51](#)):

Absolutely. And you can either go on in line and enter either those into the, my cloud, your, my cloud account or you can reach out to our support team and there'll be they'll be happy to help you.

Caspar ([00:32:04](#)):

I mean, that's just great to know that it is so broad. We know it's broad when we put patients on usually for more chronic conditions, but you know, it's great to understand that it is being used in this wide breadth but that's how energy should be used, right. It can't just be only for this one specific thing, which most of the conventional medicine would say, well, that's the way it has to be this pill for this symptom. That's it. Outside of that, you take another pill.

Jim L ([00:32:29](#)):

Okay. Casper, you hit a really good point. Most of us are conditioned to believing that side effects are bad. And that's because if you're taking two for two different things, there's a pretty good chance that they may not be complimentary, right? What the side effects of the BioCharger are, are that you have more energy, better clarity, you sleep better, and you have this heightened sense of, you know, happier. Those are kind of, you know, the side effects that we see. And the reason that I think the tide is rising in this field is that people are tired of the quick fix and they want to see results, but they also realize it doesn't happen overnight. Some people have miraculous, everyone's different. Some people have miraculous results right away. Some people they take some time, but we can generally get there. And to your point on anti-aging, there's a pretty dynamic organization called fountain life who are backed by Peter Diamandis and and Tony Robbins that are about anti-aging and using different stem cell technology.

Jim L ([00:33:43](#)):

Some very cool stuff. They're doing lots of things with lasers, but they have BioChargers and every one of their locations. And I think the point there is, you know, we're honored for that, but like in your environment, these things are complimentary. So, you know, you can have two different modalities for two different things, but you get a better outcome overall versus kind of that. And so we see that in that environment with fountain life, they go and do a stem cell treatment. They get a faster recovery. They've noticed change faster in Osteostrong, who focuses on osteoporosis or osteopenia, you know, which all of us are going to have, even when you think about your process, when you think your grandmother, right. But it's happened in all of us. And the biohacking concept that Osteostrong is

developed to help rebuild bone density is a just extremely cool technology. But when you compliment it with the BioCharger, not only does it, can it accelerate that process, but people are now recovering faster. They notice that they're sharper, mentally, they're sleeping better. And there's the communal aspect, especially now, because as you know, you can have multiple people, even with social distancing in mind using the same BioCharger and without having a technician. So from a business standpoint, you really have a great tool to allow people to get the most out of that visit.

Caspar ([00:35:17](#)):

I mean, it is so simple to utilize, meaning you turn it on. Of course, if you're a practitioner as we have here, we select the right recipe for you in that way. But you sit there and you just, you know, basically Zen out, I guess one of the questions that goes off is, is there anything that someone using a BioCharger can be doing to help with the efficacy meditation or just sitting there and the, you know, and enjoying w what can they be doing?

Jim L ([00:35:45](#)):

So meditation, you go deeper, faster period. And it's kind of answer your question a different way. We believe that having a single intention thinking a good thoughts, slowing everything down, put your phone in the next room, because if you don't, the BioCharger's going to dial the last number you get called 60 times in 60 seconds.

Caspar ([00:36:08](#)):

If that's actually true, everyone's alive saying, they're like, Oh, that's a funny joke. No, it may do that. I tried to take some pictures of the BioCharger for my Instagram and what it does. It starts seeing I'm spacing out and the phone just goes a little haywire if it gets close to it, because it's, it's a field around it. Right. That's all we're dealing with is fields here. And, and yeah. So, so definitely leave your phone away

Jim L ([00:36:32](#)):

And just let your what's your mind you know, have a little bit of a breather as well. By the way, even if the BioCharger wasn't in a room and you did that for 12 minutes a day, you'd be better off. The other thing is people that do breathing techniques like Wim, Hof, breathing, that same thing you go in, it's experientially a order of magnitude different than what they experience without it. And once people notice that they're drawn, they're drawn to it. And then you know, there's, there's folks that like to do yoga, you know, any, anything that's good for your body and is quieting is a good thing to do. You know, we've got, we've got guys in the NFL that sit there and look in a game film with Jan, a BioCharger. And, you know, they think they've gained the system because they can, they know just how far away they can be and still see the film. And we're like, no, no, no, no, no. You know, you're short, you're, you're selling yourself short there. Yeah.

Caspar ([00:37:32](#)):

And this is where I always see technology bridging that gap between medicine, biohacking, performance optimization, you know, so much of, of what I've seen here applied to of course, people that are sick and get them healthy, but apply it to people that are healthy, can get them even better. And that's, that's the beauty of it. You know, in medicine, we think that these applications are only for sick. And when I sometimes even post things of me doing the BioCharger, everything, and like, Oh, what's wrong we're sorry to hear. It's like, no, I feel great. I'm doing it because I want to feel even better. Right. And that's the cool part about it. And I guess that leads to, is there and JG, maybe you could answer that because

from a subtle energy standpoint, I would imagine there really aren't any counter indications or something as too much, you know, too much when I hear subtle energy, it's just not going to be as useful. If you take too much homeopathic, you know, remedy, it really won't do much for you. It only goes to a certain point. It's like telling someone over and over something, you get it, but then you don't have to tell them anymore. So is that true here?

Jim G ([00:38:34](#)):

Yeah. There's I agree. It's, there's that law of diminishing returns, you get with it, so it isn't necessary to use it, you know, 10 times a day. You know, from our experience to two times a day, three times a day is more than enough. Although we've been in events where we were around it all day long we go these Tony Robbins event where we have six BioCharges running and there's thousand people lined up the ready to use the BioCharger. Then, you know, w we were there all day, all night with it. But from my experience, there is that law of diminishing returns that you get from it that you know, and that's partly why we designed it because, you know, there's no need for us to be sitting around three or four hours a day or two hours or an hour a day dealing with it. We want it, we like it 15 minutes and you know, the recipes done and you're on your way.

Jim G ([00:39:19](#)):

So that was part of the, the idea was because some of these systems, you have to be rounded for hours and hours to, to experience the benefits. And we know a lot of people just don't have that opportunity to do it or want to do it. So this works out really well with it. And also to add on what Jim was talking about with that you know, the intention, you know, we, we've always talked about the placebo effect, you know, the placebo effect of the mind. And what we like to do is take advantage of that. So when you have that specific intention with it, you know, you're, you're taking that positive energy that you're creating by the positive thoughts that you are to apply it, to help the healing and sort of take advantage of that placebo effect, that science is clearly recognized. So all those little things definitely helping the experience of the bio charger.

Caspar ([00:40:06](#)):

Yeah. I have to say, you know, every therapy should be one where you're utilizing the placebo effect to your advantage. We have patients that come in and we try and teach them, even when you're getting an IV, imagine those are little soldiers going into fighting off your infection. And those that do even as skeptical as they are, you see that improvement go higher than those that don't and say laugh it off. And this is, you know, this is of course a, you know, there's science to it, but we're just looking at it from a clinical perspective of outcomes. So, you know, looking into that intention, setting an intention is incredibly powerful and healing, and then utilizing technology to compound on top of that is really great. I wanted to talk about two things that we've seen popping up a lot with patients, which is EMF and geopathic stress.

Caspar ([00:40:52](#)):

EMF a lot of people know we brought it up earlier. It's all around us. There are these frequencies. They are basically disrupting our cellular regeneration information. We get cell to cell communication. Well, one of the things we've seen in BioCharger has been shown, at least in our clinical experience to be very good with is geo pathic stress. A lot of people live in geo pathic zones. And if you're not familiar with it, it's disruptions in the Earth's magnetic field, let's say at fault lines, underground rivers, things like that. And you don't have information coming the frequencies and wavelengths that your cells need from the

earth and things like Schumann waves. Correct. So how does the BioCharger help for people that are impacted by geopathic stress?

Jim G ([00:41:40](#)):

Yeah, that's a great question. And we get that all the time. So, I mean, and especially since we're talking about the world of frequencies, so in the world of frequencies, it's really hard to differentiate. What is, you know, you have your cell phone frequencies, you have your microwave frequencies, you have your radio towers frequencies. And it what has been discovered is the difference between manmade frequencies and cosmic frequencies is everything is pulse in nature. As I mentioned earlier, everything is based off of that lightning strike, whether it's the hundred here on earth, everywhere else, it's a S it's a specific event that it's off on, off on, but it's happening all the time. The issues you have with the cell phones, wifi and things like that, it's a continuous way, power lines. There's no off and on. So it never allows the cell to go back to its homeostasis balance.

Jim G ([00:42:30](#)):

So it's actually being entrained by that continuous wave. One of the things with the bio chargers, what we're mimicking is how nature does it. So everything is all about a pulse. So it allows the we're actually acting exactly how nature does it. So when you do it that way to actually energizing, and that's part of how it helps to counteract that you know, some of those negative effects, whether it's from, like you're saying all the geo stresses that we have, or even universal, you know, we're moving through these different energy fields where sometimes we're in a higher energy state in the whole, as the earth is moving through and other times we're a lower energy state and, you know, we see it and how the plants grow. We see it and how people get sick and things like that. That's all been documented that those geophysical stresses are very real. And you know, sometimes even in nature for outside, we're not going to get it because we're in a, you know, we're moving through the earth is moving through space and an area where we're not getting all that energy where it did maybe 10 days ago or a hundred days ago cause everything's changing. So that's where the benefits of the BioCharger is, is we're able to put it right there. You know, whether the, you know, the planets aren't aligned to make it happen, you know, we can help encourage that to have happen.

Caspar ([00:43:41](#)):

And I, I mean, we have seen that where patients are especially California when they come from there, because there's a lot of geo pathic stress over there, you know, patients and they don't know what the problem they've addressed. Everything. They've looked at toxicity gone to the test mold and all of these different things that may be the underlying cause. And yet they haven't gotten better. And then we're testing. We have different ways, bio energetically test for geo pathic and it shows, and then we see what is best for them out of our toolkit. And BioCharger almost always shows and they feel better and they start to subtly slowly, you know, build up, get that cellular regeneration. They couldn't with every other type of therapy. So it's, it's really fascinating when you go into that, what frequencies, what the you know, devices like BioCharger can do to really get to that initiation point, the underlying cause of that is often forgotten so much. So that's really, yeah.

Jim L ([00:44:34](#)):

One of the examples of that that we've seen. So first of all when Georgia Slawsky he discovered that same thing and that you know, different parts of the world had different energy sources or levels of the energy. And that was the, that was the catalyst to the multi-wave oscillator which, you know, it was kind

of now embedded in the, in the BioCharger in a way. But if you look at just kind of the progression of mankind and the use of these use these tools, you know, that have now become part of modern life, they're, they're kind of robbing the energy from us and it's we're getting the wrong signals. And what we've noticed is that, you know, whether, and, you know, there are multiple ways of tests, but muscle testing is one that some people think is as widely accepted pendulum testing, but working in measuring the, the power points or chi points or chakras, and, and looking at the direction of those energy points. And, you know, we've seen people who literally have a combination of the directions changing for each of the energy points, spend 15 minutes with the BioCharger and everything is, is back in alignment. So it's just another way to illustrate it.

Caspar ([00:45:57](#)):

Absolutely. If you understand the energy is everything, you understand the subtle shifts of energy, our own energetic circuits. When they're out of line, we can't heal. We can't regenerate when they are, that that's where we can. And then every other therapy you do have, whether it's a biochemical type one IVs suddenly have more impact and efficacy. So it all works synergistically. And the bio charger is such a pivotal, I think, treatment program and, and device for using that. Now you mentioned earlier, Jerry Tennant's Healing is Voltage book. Are there any others that you recommend because this is such a broad topic and patients sometimes do want to go down the rabbit hole, they hear all these things, and maybe they haven't really touched on so many of them as most of us haven't and they say, all right, I'd love to learn more. You know, where can I, because an hour isn't going to teach you everything about Lukowski and Rife and all these masters of energy from the past. Do you guys have any books or recommendations, you know, for anyone listening to jump into that rep?

Jim L ([00:46:57](#)):

Yeah. Well, so one of the first books that inspired me was the The Secret of Life by George Lahovsky. So he actually laid out his theories. He laid out how he began to investigate it first with the plants and animals, and, and finally getting into treating hundreds and hundreds of different people, as well as the waves that heal, which also chronological the, all the research, all the patients that he had that were in it that were using it so that you could see a little bit of the, the history behind. And that was really one of

Jim G ([00:47:30](#)):

The bigger inspirations for me, but then there's, you know, other books like you know, Royal Rife, there was the cancer cure that worked was a really good book by Barry Lines. And it just, any of that research that you just Googling Royal Rife and finding some of that history behind it, I felt was a very good source, but, you know, we also like on our website, we have some really good articles and things like that that are related even, you know, we just don't spend our time in the, you know, the alternative world. We actually spend a lot of time into the, you know, the scientific world. So, you know, we investigate and you know, Scholarly, Google, all these different researchers that are out there that are looking at the, the high voltage frequencies and harmonics visible light. And there's just a treasure trove of information. It's out there for the curious person to begin to really look to see that, you know, this just isn't about us talking about it, but you know, this is really becoming an emerging medicine that people are really beginning to look at. That will be a benefit for all of us,

Caspar ([00:48:32](#)):

A really important rabbit hole to go down. I mean, once you go down, you, you never come back.

Jim G ([00:48:37](#)):

And that's what happened with me, exactly what happened. I, it opened up my eyes that Nikola Tesla opened up my eyes, the world of possibility. And I think that at the turn of last century, we had that world of possibility that there is that possibility. We may be able to create, you know, free energy or that possibility we could come up with new modes of transportation. Whereas today I think that people really feel that everything's already been done before. But when we begin to really look at some of that history and to pass it really, and it starts to see what people are presently doing at the same time, it really just paints a really nice picture of, you know, this technology and the benefits around it. Yeah.

Caspar ([00:49:16](#)):

And the benefits within medicine are just immense. I mean, my father came from conventional medicine, anesthesia surgery, like he was the most conventional guy out there. And then he went down the rabbit hole and he was changed forever. And the way he healed changed forever and patients, you know, got the reward from that or benefit from that. And I wish more doctors would go into this rabbit hole and look at things like BioCharger, which leads me to ask how has been the reception from the medical community in all, you know, I, I, I'm guessing if you went to an AMA convention and brought this, you might get some skepticism the way it looks, but you know what what's been your experience so far because medicine isn't just conventional. Now of course, there's a lot of integrative practitioners out there.

Jim G ([00:50:01](#)):

First of all, if we just kind of look at the last 12 months, 12 to 15 months, there's been an awakening. One of the things that frustrates me about our media and I won't go, go down that, talk about a rat hole. But one of the things that they never talk about is strengthening your immune system, unless it's a paid advertisement. And that that's just a

Jim L ([00:50:28](#)):

Huge miss because people need to understand that it's about letting your body building up your body to resist this. And if you do your body, will it work? So that has, even though, you know, like many others, you can say, okay, what's going to happen. About 30% of our business was event driven where we would literally be going around the world and hosting BioCharger lounges. We just saw a groundswell and, and a shift was from people that had experienced the BioCharger and thought, well, wow, I'm at home. I mean, what more can I do then to invest in a BioCharger for myself and my family? One of the things that is common among all our clients is they pretty much stopped getting sick. No, and these events that we go to, we're running really hard and sore all the attendees there.

Jim L ([00:51:28](#)):

And, you know, it's, it's hard to even think back the way that was one short year ago, but you know, literally four or 5,000 people over a course of four or five days with us, 18 hours a day, and none of us ever got sick, you know what I mean? In terms of our team, now people would burn themselves out and they, you know, hugging and all of this stuff. So those things happen, but that was to me, like, are you kidding me? You know, just watch us in that. So the immune thing is huge in terms of the progression and acceptance, I would have to say the first, it was kind of athletes as you would, as you would expect, Hey man, anything that'll give me that little, 2% difference. Then it kind of went from there into peak

performance people that are not just concerned about their physical performance, but cognitive peak performance and, and all along.

Jim L ([00:52:23](#)):

There's been kind of the woo woo. All right. And I, you know, and I say that with great respect, but people that kind of find us and they're into this stuff, but what we've seen is more of the mainstream and the doctors, the MDs, they're some of the last that come, the DOs started moving in the functional doctors, but the MDs, and you could always tell, you know, they want you to prove to them, you know, they want to see a hundred studies. They want to talk to a hundred of their peers and all that. And we just go, you know, that ain't us. We're not a medical device. You're not going to, you know, and, and we work very hard to keep that. And then then six months later, they're ordering the system. And then six months later, they were ordering a second system and then they're ordering systems for their, you know, I mean, we just see that and you know, we're in a business to make a profit and we have to do that, but there is, and I'm sure you can sense that you can feel this as well.

Jim L ([00:53:23](#)):

There is nothing rewarding and fulfilling to us than to know that every time we sell a BioCharger, it's going to help at least one other person. And, you know, we've directed a lot of our efforts to helping others introduce the BioCharger to their clients, patients, and members, so that they have a chance to experience it and get the benefits of it. And, yeah, it's good for business too, but that's been a really you know, that is, that's what gets us going. I love the, the marquee clients we have and the Hollywood stars and the super athletes. I love that, but what gets us up early and keeps us up late or knowing that the folks that may be lost hope or close to it and get their lives back, or get back on the right track or just kind of move towards a different direction.

Jim L ([00:54:19](#)):

And then you combine that with all the CEOs that have a bio charger for themselves, and they go, wait a minute. You know, why am I shortchanging my employees? And, you know, one of the, just recently a company called nurse spring, who's got nine offices. They provide nurses to hospitals. So, you know, business is good, but it's intense and talk about frontline and the, the staff workers. And they're trying to match the hospitals with the nurses and the capabilities and all that. Everybody is working round the clock. This CEO saw such an improvement for his own health. He implemented these in all of his offices, and now the offices are, you know, they're offering it to the nurses, you know, so that kind of Goodwill and, and just doing the right thing is something where we're really excited to be a part of.

Caspar ([00:55:16](#)):

I mean, it's awesome to hear that there is that acceptance and it's even moving into this sort of, let's bring it into a work area. Let's bring it into the environment. You're right. That's a big one. That is, I feel like so many companies are moving because that's productivity. That is the bottom line right there. Like you said, businesses in it for medicine, but you're doing it the right way. Consciously helping your employees stay healthy, be more productive, feel better, happier, and you're doing it. I have to say, this is the coolest part for me about BioCharger. You're taking the unseen, you're working in energy and there's so many different applications we have here that are energy medicine, but you don't see anything happening, right? Whether it's, you can say different types of acupuncture, sound therapy, everything. You don't really see it. Whereas here you have an a D a device and it looks really cool.

Caspar ([00:56:08](#)):

It turns on. And, and that alone, the visual of something and making it so technologically advanced, that is really interesting. Cause that's what hooks so many people listen, everyone. I know every patient says, wow, that BioCharger pretty cool. You know, and meanwhile, they could be doing tens of other therapies, but it's not visual. They're not seeing the changing colors and everything. So there is that physicality to it that I feel allows people to buy into it better. And it's always been listened to energy. Medicine has been around for thousands of years. We're talking about Egyptians knew about vibration. Every single civilization has utilized it. We just don't really, you know, see it as something that we want to apply because it's old, it's, you know, forgotten. And it's it's, we have new advanced technologies and conventional medicine, but what you guys have done is, is really, it should be applauded because you've taken all of that and brought it into the 21st century and beyond and made it accessible. So great job. And, and I got to ask what's next for you guys. What's next for BioCharger or any developments, new machines, anything, what do you have going on?

Jim L ([00:57:13](#)):

We've always got a lot going on. And working with working with Jim Gerard, you know, it's hard to keep the horse locked up in the stable.

Jim G ([00:57:23](#)):

Oh yeah. They finally let me go a few months ago to get me back in R D and I haven't been happier.

Jim L ([00:57:30](#)):

So a couple things for the existing platform we have we've got a new software release that's coming out in three days that's a surprise for all of our clients, you guys will get it. It's a MyCloud update with a lot of added features that have been the result of our client's feedback over the course of the last 18 months. So that that's a, that's a big deal for us. The second thing is that we've been experimenting with audio modulation sound therapy is huge, and there's an aspect of that with a BioCharger. But one of the things that Caspar even in that 2015, BioCharger, you guys have is audio modulation hardware. And there was also an optical port on the back, which will allow us to stream music, sound voice through the BioCharger. And you actually hear it through the Corona discharge being produced by the BioCharger. It's almost like a speaker. So when you think about the Gregorian chants and the Mozart's healing symphony, the monks and the Tibetan monks, and then you think about powerful people, like one of the things Tony, Tony Robbins is, you know, if you haven't guessed, he's one of our, he's one of our biggest fans, literally I've seen.

Caspar ([00:58:52](#)):

Yeah, he's a big fan and rightfully so,

Jim L ([00:58:55](#)):

But you know, when, when we streamed his voice through it doing an incantation, he loved it. He's like, Oh, we got to get this. We're all working our folks. So, so those are some things that we're working on. And then for practitioners, we've got them, we're mining a lot of data, but we don't know exactly how it's best served to you. So for multiple offices, you know, different configurations for you guys, what's the data that you want. But one of the things that, that we know is that biofeedback and we're biofeedback agnostic, but biofeedback is a big part of some of the protocols. So if we could enable someone like yourself after being certified to use a local software, that would allow you to take a direct

input from some form of biofeedback, that many of these times they come back to frequencies or ranges of frequencies and pulse, that exact frequency in real time to the BioCharger, whether it's the patient or member or, you know, your, your guests, your client is, is there or not where you could actually use potentially radionics. So if somebody that's been in has had biofeedback, you understand what they're challenged with, and we're actually using the BioCharger and directing those specific frequencies. You've kind of created a recipe on the fly, if you will, which in turn could potentially be broadcast to that client remotely,

Caspar ([01:00:36](#)):

A truly personalized experience. And that's it, right. These recipes, aren't just the, the, you know, the kind of master recipes, they're your specific recipes.

Jim L ([01:00:45](#)):

Exactly. Yeah. Very cool. Yeah. So those are some of the things we have on the horizon. And I hope Colin, Bester our third partner and our head of technology. Doesn't hear this because I'm, you know, I'm letting the cat out of the bag a little bit and we're, we're making commitments here, but we keep them. And we're very proud of the progress that we continue to make and, and it's cool stuff. And it's real.

Caspar ([01:01:09](#)):

Yeah, no, I, I mean, it sounds incredibly cool and I get that these things always of course take time and, and, you know, you got to sit there in the lab and make it happen, but it's, it's always worthwhile. And I really love what you guys are doing. Let me ask you favorite recipes, JG, what's your favorite recipe with the bio charger?

Jim G ([01:01:28](#)):

I like the general wellness one, so there's that wellness sweep. So that's a big one. I do like also the the alpha beta sweeps. So there's the ones that work mainly on the, the low frequency pulsing. But as Jim mentioned earlier, that audio modulation, I'm really becoming very keyed on that part of it. I'm really excited about the possibilities of that. Mainly with the, you know, because we're not just streaming music, but it's the harmonics and frequencies are also following the melody. So you're literally hearing any voice that you would, you would normally hear as well as instruments and things like that. And that literally it goes through that Corona discharge and the Corona discharge is pushing the air like a speaker to make it literally sound like it's music coming from it. And I think that when we we begin to really investigate that part of it down the road, you know, this spiritual, emotional, physical connection that people have with

Jim G ([01:02:20](#)):

music and sounds and things like that, that I think that that's going to be really that next level. But you know, for me, that's because I had the opportunity to do the experimentals, but yeah, mainly like those general wellness ones that I do really like, and, you know, some of the autoimmune type of stuff, because that is definitely something that's a history of my family you know, the pains and things like that. And I feel like I really have that managed extremely well right now. I like to keep everything as a maintenance thing, you know, so I continue to use it. I use it every single day and I've done it for over 30 years now.

Caspar ([01:02:55](#)):

Right. You got the prevention and maintenance and optimization going on. So that's great. Jim, what about yourself?

Jim L ([01:03:01](#)):

So in a perfect world three times a day, early in the morning, I do something like ultimate adrenal, which is, you know, our adrenals are fried, you know they're supposed to be for fight and flight. You break a fingernail, your adrenals kicked in. But that, that is something that moves me pretty well. At lunchtime or early afternoon, I'll either do one for mental clarity call get the edge or one called pineal mastery. And what that does is it kind of activates the pineal gland and your third eye that, that for if I need to get creative works. And then at home my wife's a huge BioCharger fan. And she never was until menopause. And she finally, you know, that was what converted her. I'll just leave it at that. But we'll do there's one called Nirvana, which is just takes the stress out. We'll have a glass of wine sometimes. And that just man, when she's ready to have Nirvana, I can't get there fast enough. And then the other, the other option is at night I'll do theta wave, which is, I don't necessarily sleep longer hours, but noticeably deeper sleep I'm in at my Apple watch two different apps. I use, I double the amount of deep restful sleep on a consistent basis when I theta wave versus when I don't. Yeah.

Caspar ([01:04:32](#)):

All sound like great options. Where can people learn more about bio charger, everything you guys are doing?

Jim L ([01:04:37](#)):

Biocharger.com is a great resource. If you're into Instagram, we're @biochargerNG we're, you know, we've got pretty good social media presence. If you're around the country and you're interested in the BioCharger and want to learn more, we'll try and arrange for you to find a local place that you can go and try it. If you've got questions you know, we're happy to help out. And we've got a great w we call our, our sales team kind of sales guides, but they really are about helping you either get access to one is not everyone can afford one or to help you optimize it. And we've got great support. So there's people that think, Oh my God, you know, I've already invested, you know, \$25,000 and I don't have anything that works. I'm still worse off. I don't know how to use it.

Jim L ([01:05:31](#)):

Those fears go away. We have a 45 day, 100% money back guarantee because, you know, we realize it takes a little bit of handholding and it's a big investment for people and we've got the support team. And then when we call health optimization team, that ensure, and that's all part of what you get ensures that not only do you know how to operate it and you're to your point, it's really, really safe and easy to operate, but how to get the most out of it. And I circled back to the first thing that we talked about was our backgrounds and with Steve Jobs, you know, that, that, that driving force begin with the user experience in mind. I like to think that we followed that guideline. And the feedback we get today is in all along has been, we have, I could echo that as well, and you guys have done a great job.

It's a great therapy. We're really thankful. And so are patients. And I hope more people learn about it, understand it jumped down the rabbit holes. And also because experience is the biggest key there, I will say, like you said, doctors always want to see evidence, but if evidence were, we'd all be healthy with six packs right now, evidence is not always the guiding force to everything. Right. We know that now. So,

you know, experience is the best. So absolutely anyone out there experience it. It's great. It's wonderful. And thank you guys so much. Thank you. Well, thank you.

I really enjoyed this conversation with JG and Jim and hope you did as well. I may have a slight bias as I utilize BioCharge in my own health regimen, but it's a bias of experience and witnessing results of patients who have utilized the in therapy is part of a comprehensive and personalized protocol at our center. Be sure to check out their website [biocharger.com](http://biocharger.com) and follow them on Instagram [@biochargerNG](#) that's biochargerNG all together. It's a really fascinating therapy to see visually as well, and is an amazing advancement and wirelessly charging and revitalizing the human body and be sure to check out our other podcasts and articles at [innovativemedicine.com](http://innovativemedicine.com). And if you enjoyed this episode, leave us a rating on iTunes, Spotify, or wherever you're listening to this. As Nikola Tesla said himself, if you want to unlock the secrets of the universe, think in terms of energy, frequency and vibration, BioCharger has achieved unlocking some of these secrets and using it to optimize our health till next time, keep writing your own healing story.
