On the Leading Edge of Science and Laser.

Prioritize your health and well-being, give your body the care it needs before aches and pains manifest. That is the premise under which we have developed the EndoLight®.

W Medical Systems GmbH was established in 2015 and is a partner of Weber Medical GmbH. Weber Medical was founded in 2003 by Dr. Michael Weber after many years of research in medical laser therapy and is now recognized as one of the world's leading companies in this sector.

This cooperation allows us to closely collaborate with a large network of doctors from all over the world. Our common goal is to integrate research, development, training, and sales of regenerative medicine. By incorporating the latest scientific findings and innovations into our products we are continually striving to further advance and optimize them.

The EndoLight®, which we present in this brochure, is the latest innovation, created through many years of cutting-edge research and clinical experience in laser therapy. Based on current scientific findings it reliably helps to improve well-being - anywhere and at any time.

THE ENDOLIGHT®

Recharge. Relax. Recover.

Improve your well-being at
the touch of a button.

IGNITE YOUR VITALITY

The 3 Pillars of Well-being

The EndoLight® elevates your wellness based on your unique needs. Put the band on, select one of the three modes and feel the difference.

Your goal is to support your immune system, to

increase concentration and performance or to help to reduce stress: Invest 30 minutes to do something good for yourself - for more vitality, energy, and balance.

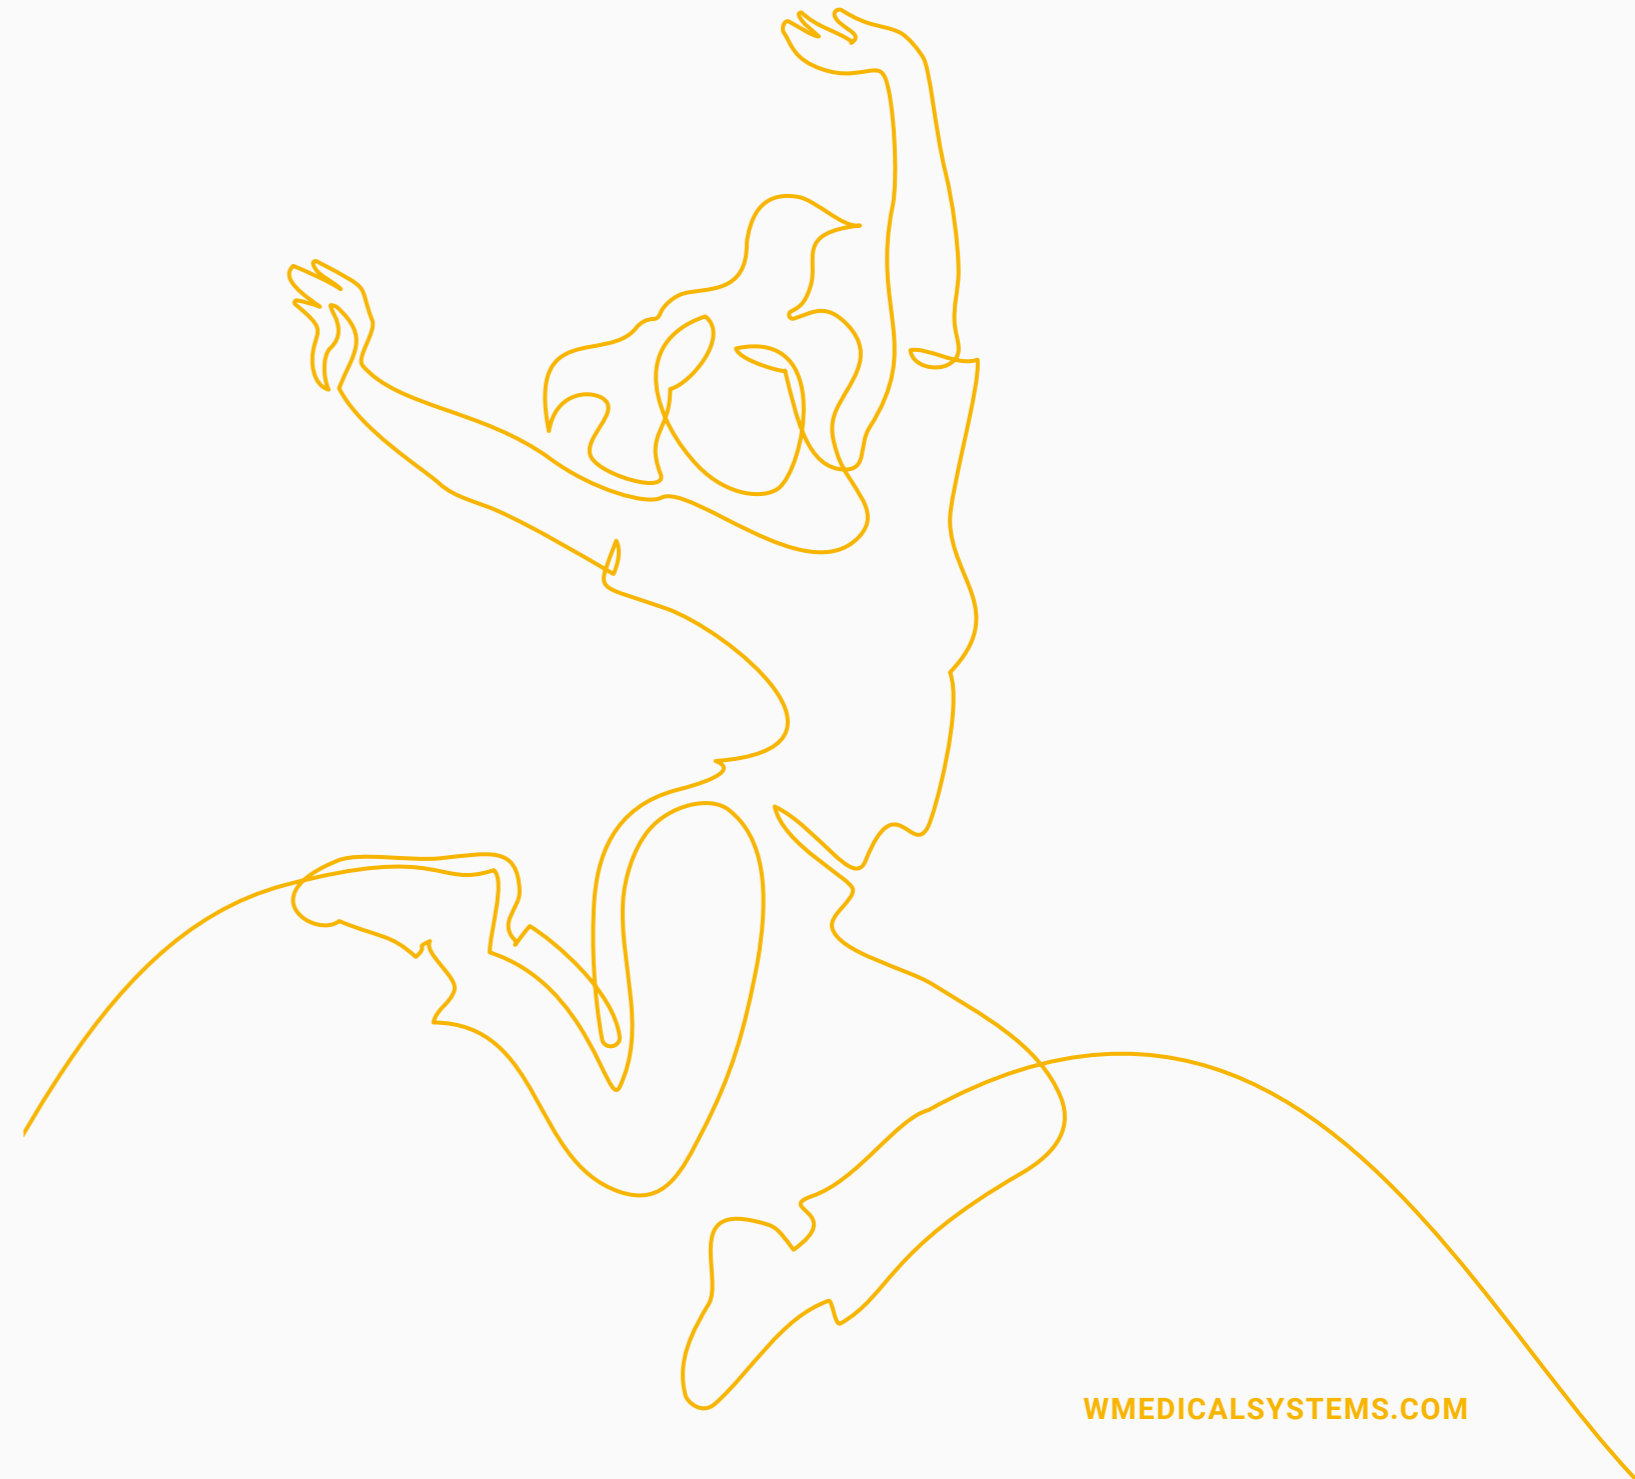

Energy level

Mind and mood

Immune system

IGNITE YOUR VITALITY

Increases your energy level

Whether at work or during your training at the gym: your body expends a tremendous amount of energy! For many of us, the pressure to perform and tight deadlines are part of everyday life. This means additional stress for your body.

The EndoLight® helps you master your daily challenges with ease.

During workouts, the EndoLight® can provide extra energy, helps you achieve peak performance and improves recovery.

At work, it helps reduce physical and mental fatigue, supports mental agility and improves focus - helping you to stay productive throughout the day.

IGNITE YOUR VITALITY

Restores your mind and elevates your mood

Regeneration is a vital necessity. Even beyond sleep our body needs regular breaks to recover and repair. It can often be difficult for us to calm the mind. Treat yourself to a little rest and

experience moments of relaxation and inner balance. The EndoLight® helps provide a mental break and fast recovery - for more balance in your daily routine.

IGNITE YOUR VITALITY

Supports the body's immune system

The EndoLight® supports the body's own innate defenses, providing you with more vitality.

From years of experience in the clinical field of laser therapy, we know how stressful a disease can be and how a resilient immune system can

support health and successful rehabilitation.

Based on this understanding we have developed the EndoLight®, which helps increase your fitness and overall daily performance.

HOW IT WORKS

5 Colors. 3 Modes.

Improve your well-being
within 30 minutes.

Light-sensitive receptors in our body cells react to different wavelengths of light. The body uses this light to produce energy, fortify the immune system and perform other health-promoting processes. The special arrangement of laser diodes in the EndoLight® guarantees optimal light irradiation of the circulating blood via the arteries in your wrist.

On a systemic level each wavelength, or color, exerts its own effects. You can control these effects through using the three different modes. You decide at the touch of a button how the band can best support you for 30 minutes.

Recharge:
Increases the
energy level

Relax:
Supports mood
and relaxation

Active diodes

Recover:
Strengthens the body's
immune system

ALL FEATURES AT A GLANCE

Smart Design and Intuitive Handling

Skin-friendly silicon wristband. Available in two sizes to fit any wrist.

Ultra slim and ergonomic design provides improved comfort.

Intuitive buttons for easy handling.

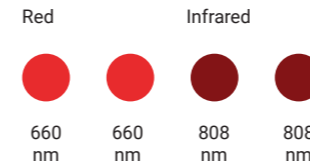

Three pre-set modes facilitate the selection of the right diodes

Technology Brought to the Next Level

Seven laser diodes and one powerful LED (35mW/Diode)

Irradiation of Arteria Radialis

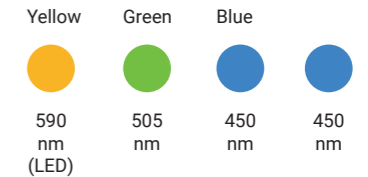

Increased safety due to contact sensor: Diodes are only activated when close to skin.

Use of optic lenses and glass matting to direct the light specifically.

Adjustable output:
25 % | 50 % | 75 % | 100 %

Irradiation of Arteria Ulnaris

Audible signal indicates when skin contact has been interrupted or the session has ended.
